ANOVA #3

Friday, May 4, 2018 7:57 AM

$$F_{stat} = \frac{MSR}{MSE} = \frac{SSR}{SSE}\,\frac{df_e}{df_R} = 2.31 = \frac{SSR}{SSE}\,\frac{94}{5}$$

$$\Rightarrow SSR = .12 \times SSE$$

$$SST = SSR + SSE$$

$$= 1.12 \times SSE$$

$$s = \sqrt{MSE} \Rightarrow MSE = s^2$$

$$SSE = MSE \times df_e$$
